# THE CYBER SECURITY EXPERT

Is a core element in an organization to counter crucial threats of cyber attacks including

**Cyber  
Espionage**

**Cyber  
Crime**

**Cyber  
Warfare**

To upgrade your organization cyber team to become an expert cyber security Team, we introduce our Devusion System as a comprehensive training and simulation solution.

This system is equipped by an essential virtual machine. Compiled and designed based on real cyber-attacks experienced by both military and private organizations. In order to enhance your cyber security team, we have also introduced the types of cyber-attacks that can occur in the future in the Devusion System, so that the capabilities and capacity of your team will be updated.

The Devusion System is also known as an integrated component of various cyber defense solution.

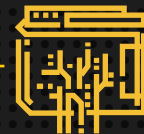

Technology is a part of the solution  
 The method used in Devusion System is  
 to learn and know the strategies of  
 cyber-attack in order to do prevention.  
 The ultimate goal is the security of your

■ **A strong cyber security system** needs a great Anti Cyber Warfare team. These cohesive combination shall manage the cyber threats easily. Therefore, an organization needs a group of people who are:

we provide  
the best  
solution to  
train your  
team or  
personnel.

# CYBERWAR TRAINING AND SIMULATION SYSTEM

## Solution Overview | Direct training of cyber security teams at all levels in IT and SCADA networks

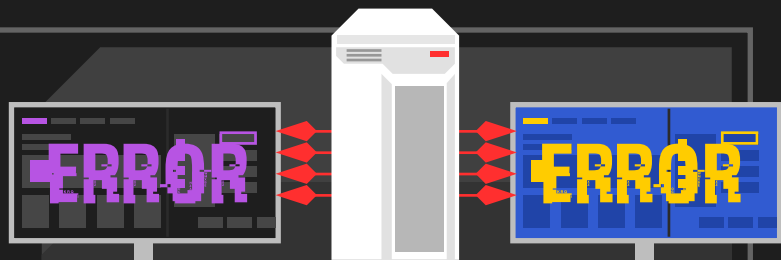

01.

A real time network of cyber attack simulations .

02.

Automatic  
Attacking System

03.

a Dynamic monitoring  
simulation

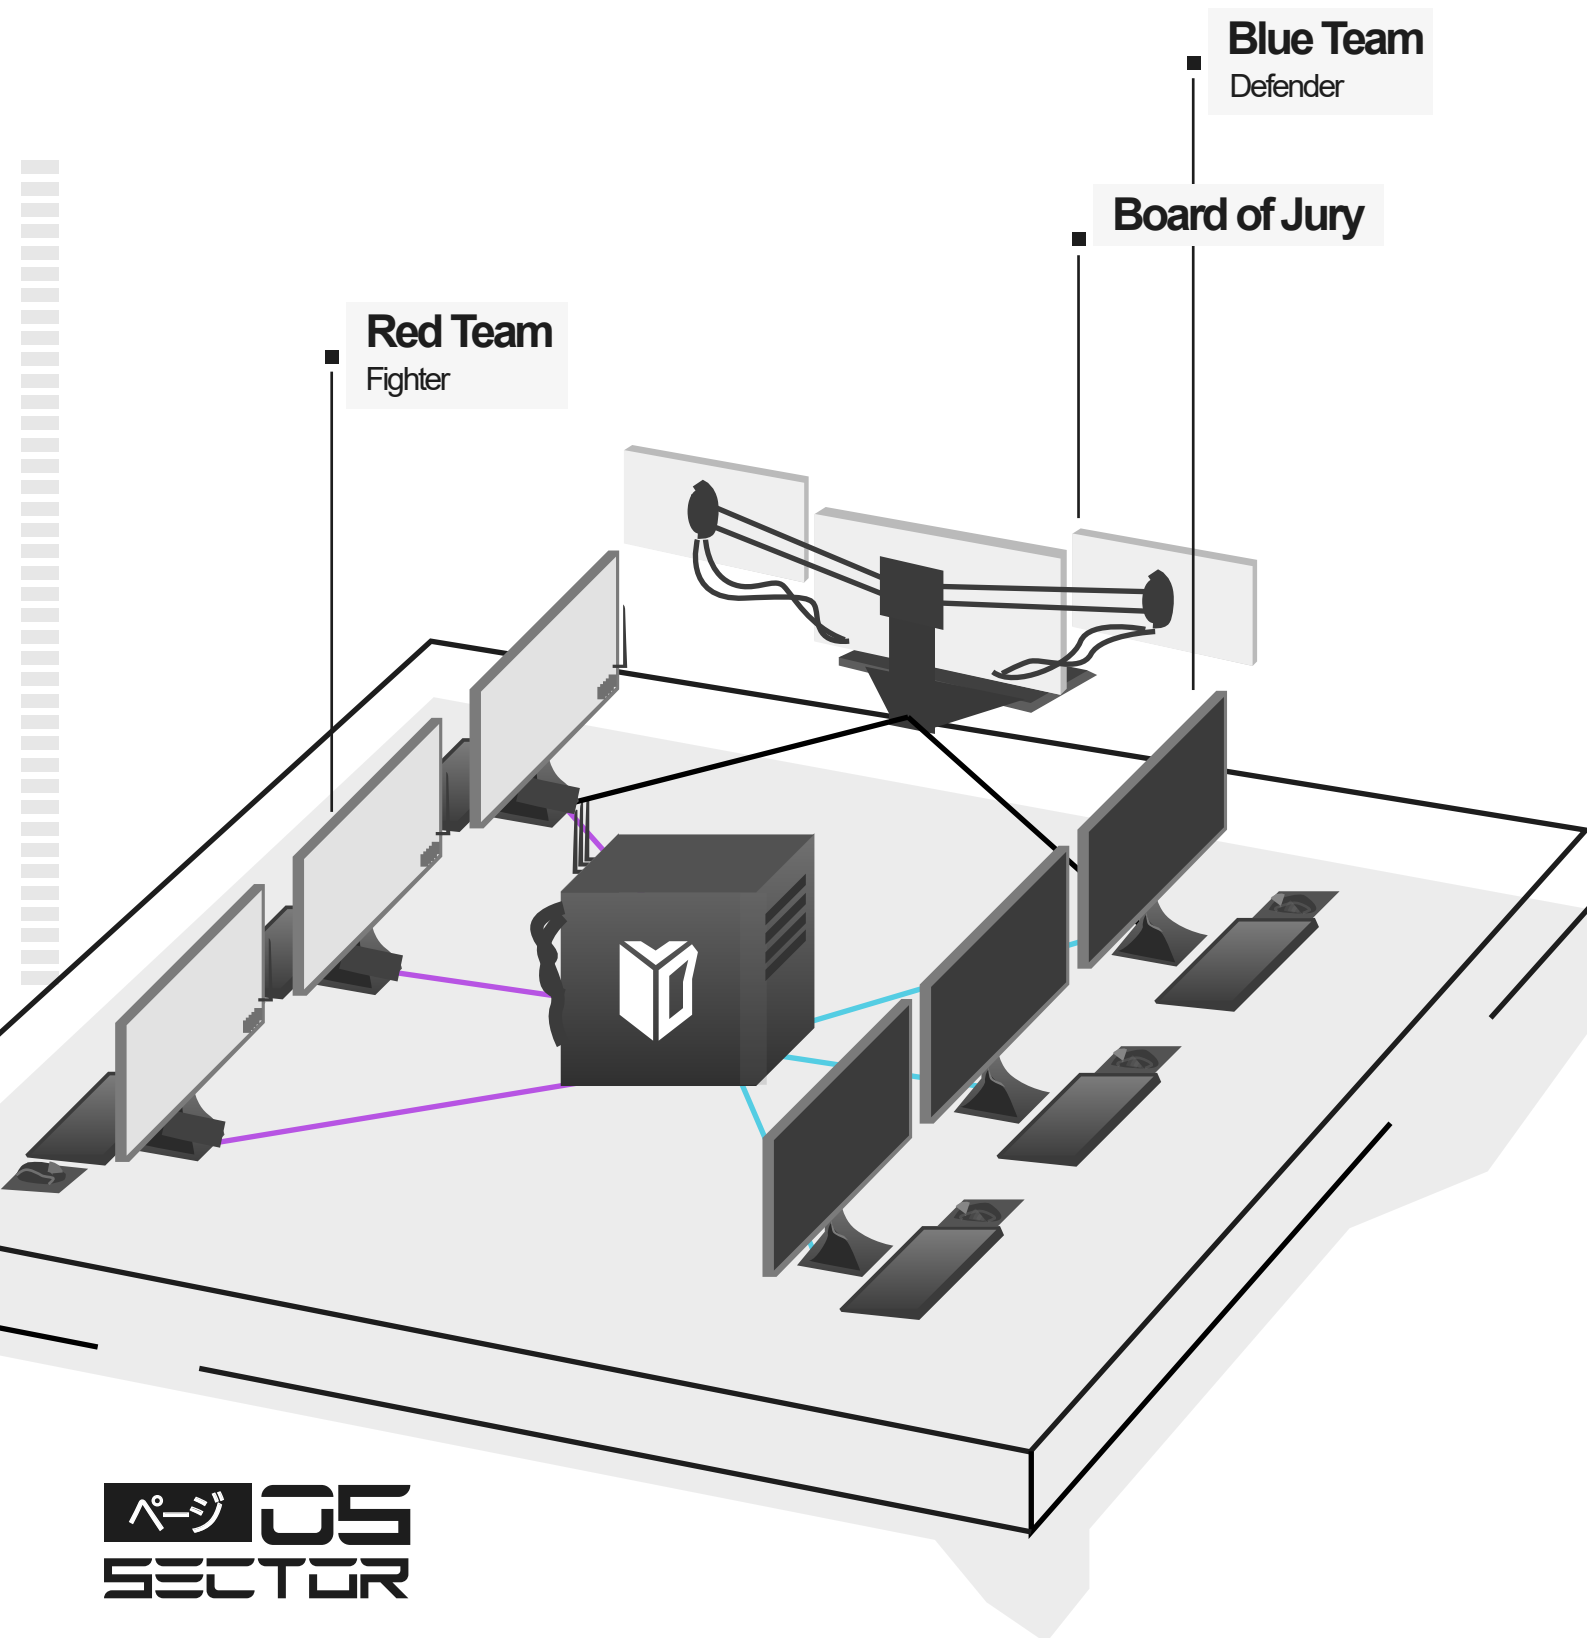

04.

A hands-on training  
method according to  
real cases

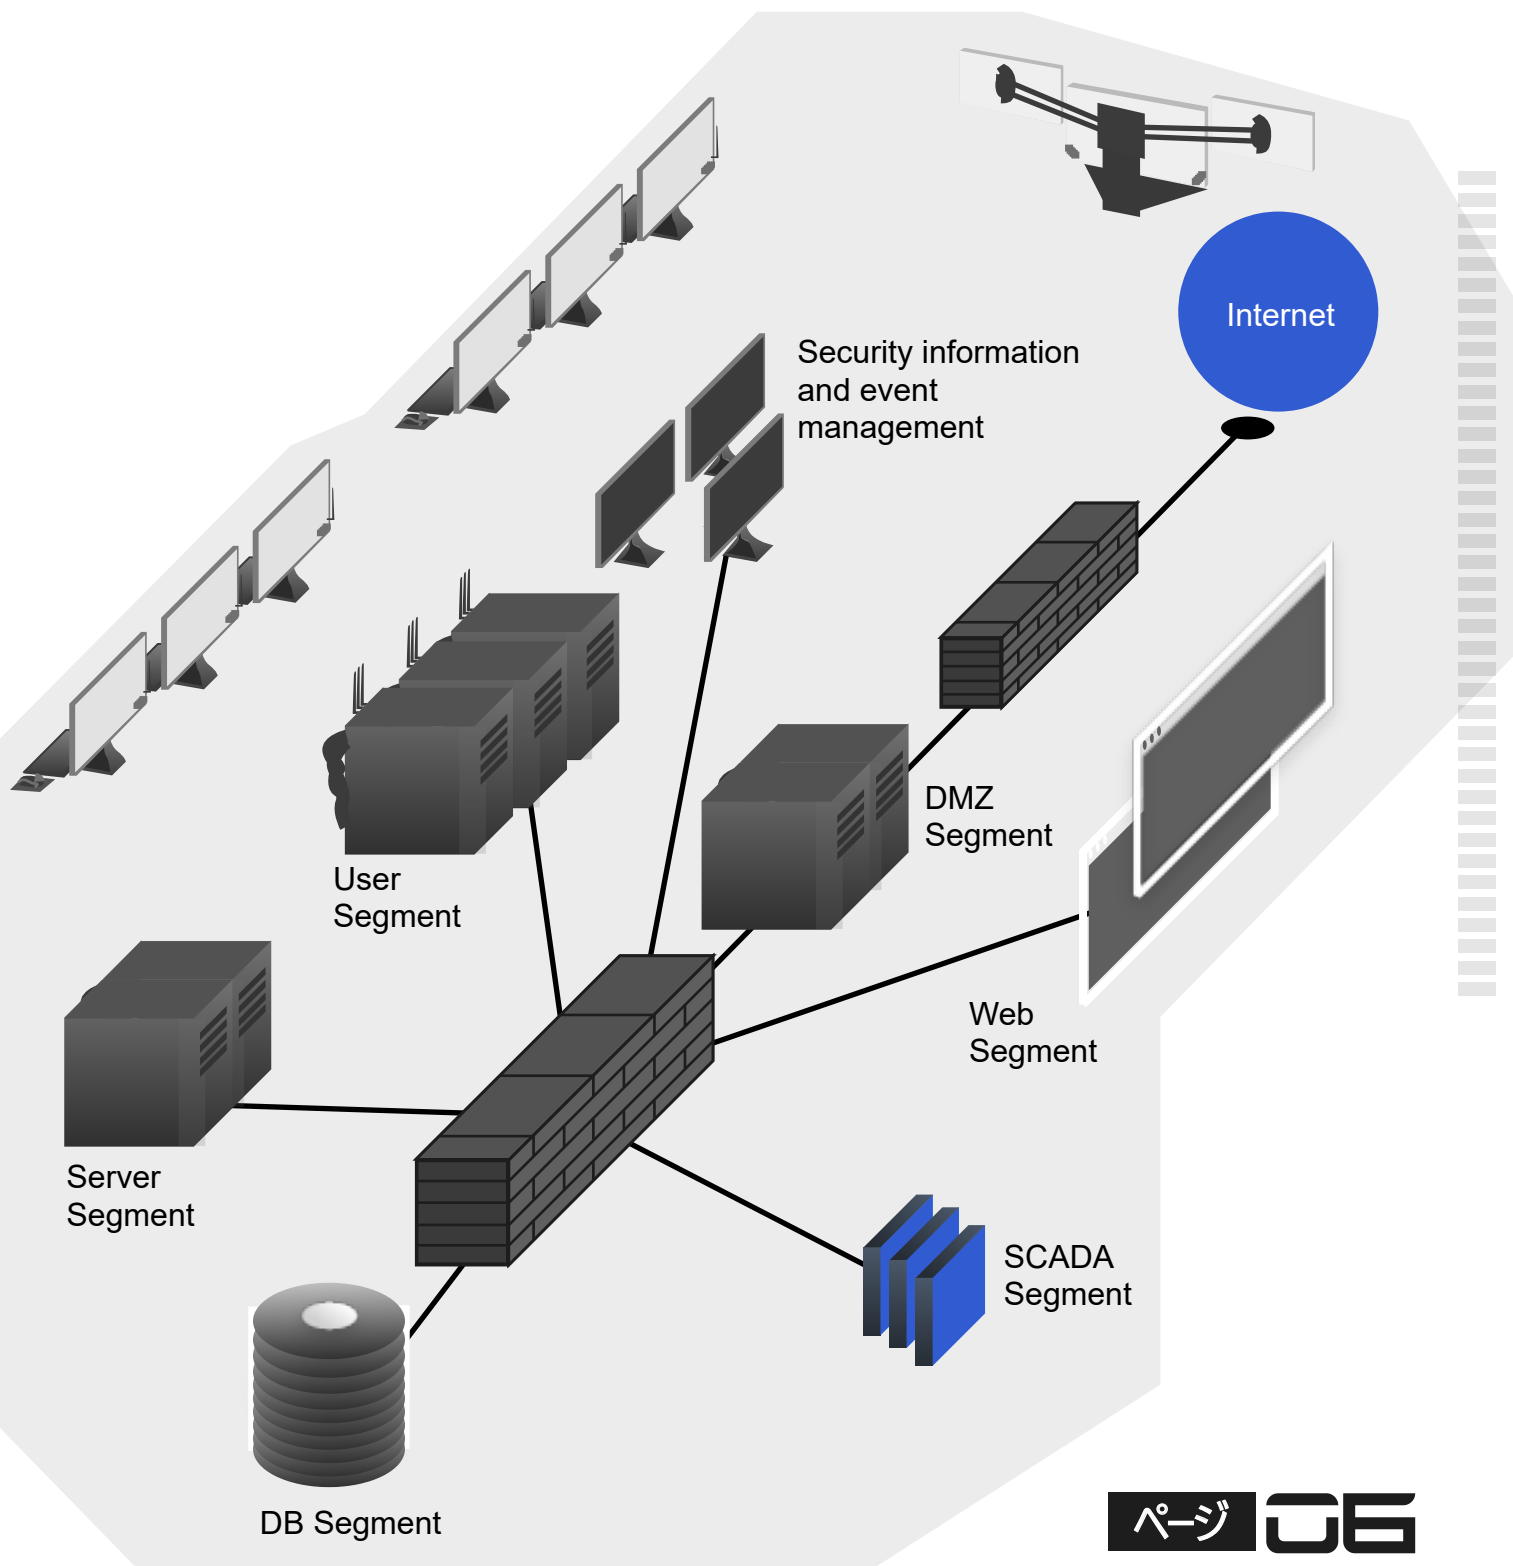

# Structure Solution

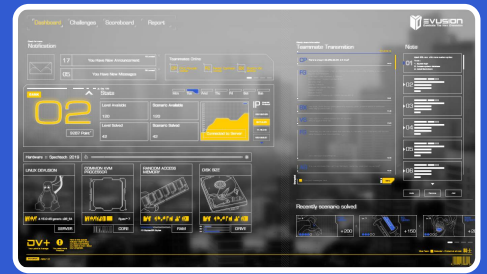

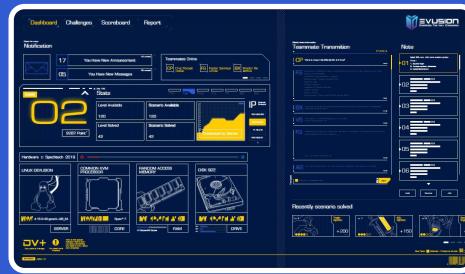

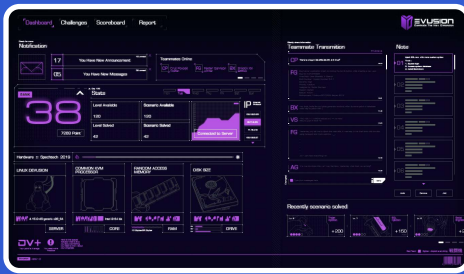

- Monitoring by board of Jury
- Traffic Simulation
- Attacking Simulation

# Main Module

## Training Preparation

- Scenario Selection
- Network Modification
- Team Allocation
- Time required determination

## Training Execution

**Cases execution based on selected scenarios:**

- Defense and attack simulations
- Normal and threat networks condition
- Full monitoring by board of jury

## Training Summary

**Review and Evaluate trainees performance based on:**

- Trainee's reports
- Score-board system
- Training documentation

# The Devusion System is able to

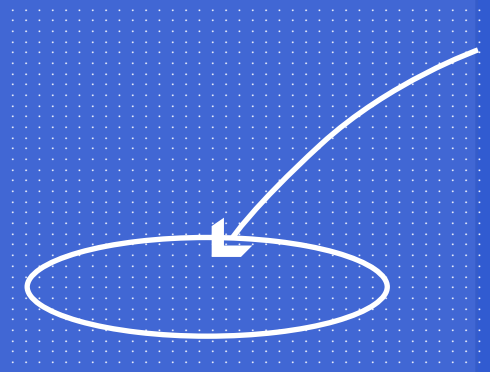

- Generate Traffic  
Escalates traffic into the simulation network

- Simulate Regular Network Traffic  
Traffic http, https, ftp, smtp, pop3 and etc.

- Provide Cases of Multi-level threats,  
Possess a skillful attack capabilities and performs a comprehensive assessment of each phase of attack

# Different Types of Threats, from Different Network Locations
